

Pseudocode for Code 4: Passing Cars

```
FUNCTION solution(A)
    east_direction ← 0 # Starts a count for the cars heading in the east direction
    pairs ← 0 # Starts count of pairs of passing cars
    FOR EACH car IN A # goes through the cars one at a time
        IF car = 0 THEN # checks if car is going east
            east_direction ← east_direction + 1 # if east, then add to east count
        ELSE
            pairs ← pairs + east_direction # When a west car passes an east add to pairs
            IF pairs > 1,000,000,000 THEN # if over 1 billion
                RETURN -1 # stop and return -1
            END IF
        END IF
    END FOR
    RETURN pairs # gives the total pairs
END FUNCTION
```
