Pseudocode for Code 3: FrogRiverOne

```
FUNCTION solution (X, A)
    N ← length of A
    leaf_spots ← empty set
    FOR K FROM 0 TO N-1  # K is the second (index), starting at 0
        add A[K] to leaf_spots  # where the leaf lands and adds the position to set
        IF size of leaf_spots = X THEN  # checks how many diff. positions are covered
            RETURN K  # gives back the current second
        END IF
    END FOR
    RETURN -1  # goes through every leaf and if river is not fully covered return -1
END FUNCTION
```
